

Press Release

30 January 2008

Fluxys: open transfer of gas without capacity limitations in the entire Zeebrugge area as from 1 February 2008

Fluxys is to launch on 1 February 2008 its full ZEE Platform Service. This will enable shippers to transfer gas without capacity limitations between all entry points in the Zeebrugge area including the LNG terminal. The full ZEE Platform Service marks a further step in developing the Zeebrugge area as a central crossroads for international gas flows in North-west Europe.

Switch to full ZEE Platform Service through investment in additional regulation stations

In December 2006, Fluxys introduced the ZEE Platform Service in its first phase, offering an overall capacity of 400,000 m³/h for open transfer of gas between three entry points in the Zeebrugge area. The service was made available for shippers through a capacity allocation procedure.

Press Release

30 January 2008

In the meantime, two additional regulation stations have been built and commissioned in the Zeebrugge area. This investment enables Fluxys to switch to the full ZEE Platform Service without capacity limitations and open transfer of gas between all four entry points in the Zeebrugge area including the LNG terminal:

- the Zeebrugge hub,
- the Interconnector Zeebrugge terminal, feeding either UK gas into the continent or continental gas into the UK,
- the Zeepipe terminal, feeding Norwegian gas into Belgium and France,
- and the LNG Terminal.

Full ZEE Platform Service: simply book and go

As capacity limitations are removed, there is no capacity allocation procedure for market participants to join the full ZEE Platform Service. Current ZEE Platform Service users will automatically switch over to the full service. Any other interested shipper only has to book the service with Fluxys.

Tariff structure coined to stimulate liquidity and offer flexibility of usage

The tariff structure for the full ZEE Platform Service is not capacity related and has two components: a fixed Membership Fee, determined by the number of entry points the shipper wishes to include, and a variable Volume Fee depending on the quantities effectively transferred.
